

IDSolutions' new "Vidyo for Canvas" integration module seamlessly connects our industry-leading Flame video conferencing service with the Canvas Learning Management System (LMS). Providing support for both live and on-demand video playback, teachers and students can collaborate more effectively within the LMS while leveraging existing course workflow.

Functionality Simplifies LMS Video Workflow

Teachers can now add pre-recorded rich media content quickly and easily to assignments and discussions while scheduling live video meetings with students from within the LMS.

Video Centric Assignments: Teachers now have the ability to add a Flame video asset directly to a course assignment or discussion with a single mouse click. Students can view the asset from within the LMS in an embedded window without ever having to leave the LMS.

Scheduled Open Office Hours: Open office hours with live video meeting rooms can now be scheduled in advanced and automatically added to the LMS calendar. Students can easily see when the teacher is available for help and join by clicking on the virtual room link.

Interactive Breakout Rooms: Teachers can create video conferencing breakout rooms where students can collaborate with one another on assignments, study for tests and more.

Flame is a NET+ service offering that provides a turn-key video conferencing platform with the following unmatched features and benefits:

- Eliminates need for video experts
- Room sizes up to 100 participants
- Encryption and redundancy
