

Flame NET+ Enhancements

Q1/2016

Flame is our premium NET+ Vidyo service delivered by IDSolutions over the Internet2 backbone. Flame is a simple to use, cloud-based video conferencing service that allows seamless interaction with fellow faculty, students, researchers and guests around the globe.

New Capabilities Expand Classroom Applications

Inclusion of recording/webcasting in base offering, increase in community license pool and options for both scheduling and Kaltura integration increase overall value and use cases.

Recording/Webcasting: The ability to record or webcast a conference and play it back on-demand is now included in all base packages and allows a variety of new applications.

Scheduling: Conferences can now be scheduled in advanced and automatically connected at a specific date/time. Special pricing makes this option very attractive for all customers.

CLP Increase: The Tier2+ community license pool has been increased to 150 licenses to allow for special events such as MOOCs, large research projects and guest lectures.

Kaltura Plug-in: Customers with Kaltura Media Management systems can automatically synchronize recorded Flame content with special pricing for the KMS-Flame plug-in option.

Flame provides access to a turn-key video service offering unmatched benefits and features:

- Eliminate need for video experts
- Room sizes up to 100 participants
- Encryption and redundancy
- Completely managed service
- Meeting room privacy locks
- Document/media sharing
- Concurrent licensing
- Guest invitation emails
- Full mobility support
- Community license pool
- Audio/video privacy controls
- SAML/Shibboleth access
