

Do more with less. In today's fast paced business environment, companies are challenged to do more with less. Employees are dispersed in many locations and using multiple UC devices such as tablets, PCs, smart phones, and a multitude of collaboration applications. Despite the challenges of expanding scale and providing support for a plethora of device types, network administrators need to ensure that video collaboration is reliable and easy, no matter where employees are working or device they are using.

Growing demand. Enabling the growing demand for video collaboration from any device anytime and from any place increases the necessity for seamless integration of once disparate networks. As a mission critical collaboration tool, telepresence must be as resilient and redundant as other mission critical UC solutions, such as data network, voice and email solutions. And like those solutions, telepresence support must be part of the overall business continuity plan for any small or large outage scenario.

Unifying communications. The powerful IDSolutions Global Presence® DMA® solution allows users to connect regardless of protocol standard, device, network, or location making communication between employees, partners and customers simple, yet effective. Administrators can expand and offer new services by leveraging existing communication network investments through the Polycom RealPresence DMA system. With the broadest partner support, centralizing the dial plans, provisioning, and management is simplified without complex reconfigurations or replacements of bridges or voice IP PBXs.

Reliable and scalable virtualized video services. The highly resilient and scalable Global Presence DMA solution supports any size video network from small deployments of less than 100 devices to an unmatched scale of 25,000 concurrent calls and 75,000 registrations for the largest available networks. Intelligent load-balancing and redundant auto-failover, configured in geographically distributed super clusters, deliver unmatched resiliency. Telepresence is now as reliable and available as other mission critical communications, such as voice solutions. Utilizing intelligent algorithms, the powerful software inside the Global Presence DMA solution dynamically routes calls throughout the network based on priority, class of service, resource availability, network outage, and highly efficient load balancing and virtualization of bridging resources. Centralized reporting and monitoring and native integration with Microsoft® Active Directory® dramatically simplifies "meeting room" provisioning and slashes ongoing administration costs.

Benefits

• Universal Dialing Plan

Connect regardless of protocol standard, device, network, or location, providing seamless connectivity without complex reconfiguration of UC environments; reducing costs and extending the value and reach of existing UC investments

• Highest Resiliency

Redundant application servers and databases, with geographically distributed clusters, ensures high availability services

• Unmatched Scale

Supports 75,000 device registrations and 25,000 concurrent calls, and provides load balancing and MCU resource management for up to 64 bridges in the most demanding environments

• Simplified Administration

User accounts and personal meeting rooms are automatically provisioned centrally, with minimal administrative effort

• Collaboration 3.0

XML standards based API suite for custom provisioning, conference management, billing and resource reporting applications. Add Resource Manager APIs for a complete video conferencing management API solution

• Increased resource utilization

Advanced routing algorithms maximize resource utilization and dynamically distribute calls to optimal media server
