

Universal Video Collaboration

Global Presence Firewall Traversal and Security solutions remove communication barriers to allow your teams to collaborate more effectively over video.

Collaborate without boundaries

These solutions provide a secure route for users to connect from virtually any location and device, providing support for business-to-business and intra-company collaboration. Access Director enables users within and beyond the firewall to securely access video services—whether at home, in the office or on the go.

Access Director is:

- **Software based** - A software based edge server, Global Presence Access Director securely routes communications, management and content through firewalls without requiring additional client hardware or software. Your IT users can easily and effectively deploy, configure and manage Access Director™ while reducing the cost to support the growing number of video enabled workers in your organization without compromising network security.
- **Completely Integrated** - Access Director is tightly integrated with Global Presence management and monitoring tools to control all the devices on your network and Global Presence Gatekeeper DMA to manage and distribute calls across the network. The Access Director capacity scales from 25 to 1,000 concurrent calls depending on the licensing selected and supports SIP and H.323 remote users, RTP/SRTP media relay, HTTP(S) tunneling, AVC and SVC codecs, LDAP/H.350 directory, HTTPS/XML provisioning, WebRTC and much more.

Key Benefits:

- **SIP/H.323 combined support**

Single server application that combines remote and B2B calling scenarios with SIP and H.323 (AVC and SVC) capabilities for a seamless video collaboration experience within and beyond the firewall

- **Secure collaboration from anywhere**

Collaborate over video while on-the-go, in the office or from home

- **Protect your investment**

Now and for the future: Leverage existing investments in unified communications products and IT infrastructure and build towards a SIP based future

- **Secure scalability for mobile**

Easily, securely and reliably extend the use of video collaboration to your mobile workforce and webcam.

- **Reduce cost to scale**

Support a thousand simultaneous video endpoints securely without requiring additional client hardware or software

- **World-class interoperability**

Collaborate seamlessly with others using H.323 mobile, desktop, and room systems while recording the meeting
