

Global Presence Multi-Presence Service

Provides multi-party video, voice, and content collaboration that connects the most people at highest quality and lowest cost.

Collaborate from anywhere

More and more organizations want their employees to share the next great idea face-to-face, wherever they are located and on whatever device they choose. Based on open standards, the architecture of the Global Presence Multi-Presence Service is uniquely integrated with hundreds of business, UC, and social networking applications and protocols to make it easy to meet face to face with others over video.

With Multi-Presence organizations can:

- Connect employees, partners and fragmented communication systems, through the industry's broadest support for existing and emerging standards, protocols and natively integrated applications.
- Support future collaboration technology through the industry's broadest support for existing and emerging standards, protocols, and natively integrated applications.
- Reduce operating expenses and increase call capacity, through unprecedented delivery efficiencies that use up to 50% less bandwidth.
- Expect enterprise-grade collaboration, with 100% auto-failover, extreme scalability, security and interoperability.

Key Features:

• **Diverse conferencing capabilities**

Over 30 different layouts, profiles and templates to make your conference experience unique to your needs.

• **Reliable video collaboration**

Powerful redundant collaboration servers, Global Presence Gatekeeper DMA licenses, and geographically distributed super clusters eliminate single points of failure and provide high availability.

• **Higher quality user experiences**

With break-through audio and visual technology – such as NoiseBlock™ that eliminates unwanted background noise - to make video collaboration experiences better than being there.

• **Web Suite Support**

Key components of the Global Presence Service and Web Suite licenses extend enterprise-grade visual collaboration to anyone, anywhere with just a browser

• **Choice, flexibility and scale**

Get the right solution for specific business needs through the broadest range of delivery options - on-premises, hosted, or hybrid cloud delivered.

• **Harness information and increase knowledge sharing**

Dynamic workflows to control how users share media to private or public channels to engage teammates, workgroups, or the entire organization
